

ABSTRACT

This invention enables a searcher to analyze search results, intuitively. Data items of plural documents extracted by the search are presented as the following processing keys and selectable display items to a user in a first display form, and in response to the user's selection of the display item, data items of the documents corresponding to the selected display item are further presented to the user as the further following processing keys and selectable display items in a second display form designated by the user. Therefore, the analysis object and display manner are changed with an intuitive interface to progress the analysis.
